

Safe and Compliant: Pre- and Post-Inspections Keep Your Fleet Moving

Pre- and post-trip inspections help ensure safety and legal compliance, while preventing costly delays and repairs.

PreCise® Professional Services

Pre- and Post-Inspection Application

- Configurable forms tailored to your specific vehicle inspection needs.
- An administrative component for creating custom forms and managing users within the application.
- Web-based forms enable connection from any device.
- Automated workflows notify fleet services of necessary vehicle repairs identified during failed inspections. Once repaired, service updates the form, which automatically notifies the driver or supervisor.

Implementation Services

- Assess and refine the project scope, schedule, and task list to align with your organization's needs.
- Gather inspection requirements, including types, points, and fields.
- Design and develop initial pre- and post-inspection forms and points.
- Assist with internal testing and deployment.
- Provide end-user and administrator training, along with Go-Live support.

Pre- and Post-Inspections

Pre- and post-trip inspections are critical to driver safety, road compliance, and eliminating costly disruptions. Our solution features configurable, web-based forms that adapt to your vehicle inspection needs, accessible from any device. Administrators can easily create custom forms and manage users, ensuring flexibility and control. Designed for speed and efficiency, the system includes automated notifications and workflows that alert fleet services teams about needed repairs. Once repairs are complete the system automatically alerts drivers or supervisors. This streamlined process enhances maintenance efficiency and ensures vehicles maintain optimal performance.

Implementation Services

- **Planning and Kickoff Phase:** A kickoff meeting will be held with key stakeholders to identify the scope, schedule, and project contacts. Following the meeting, we share the implementation plan, including a detailed timeline and milestones.
- **Requirements/Design:** Offering up to two design meetings, PreCise gathers your inspections requirements (pre- and post-trip), along with the details about users, administrators, and workflows. We gather information on inspection types, inspection points, and fields on each inspection form.
- **Design and Testing:** Design and develop the initial pre- and post-inspection forms and points (up to 4 inspection types and a maximum of 16 inspection points per form) based on the requirements. These include user setups, workflows, email alerts, and notifications. Finally, we perform internal testing on the new pre- and post-inspection application to ensure it performs as designed and meets requirements.
- **Review Meeting:** A review meeting will be held to allow the organization to review the application and its workflows. During the meeting, PreCise demonstrates the application based on your unique requirements and workflows. We document feedback from stakeholders and make any adjustments as needed.
- **Revisions/Final Deployment:** Revisions are made to the pre- and post-inspection application based on the client review. We can create up to 4 inspection types and up to 16 inspection points and/or forms. It will be up to your users to create inspection points and forms beyond this number. Users will learn how to create types, points, and forms, as well as adding users and workflows during training.
- **Training and Go-Live Support:** At Go-Live key staff with training on the pre- and post-inspection forms, including the end-user and administrator training (i.e., how to set up new forms, add users and workflows), will participate. PreCise staff will be available for support at that point.

FAQ

Q: Why use PreCise Professional Services? PreCise has extensive experience with fleet management and vehicle maintenance, specifically related to AVL/GPS technology and pre- and post-inspections. We assist with deploying your pre- and post-inspection app to meet your organization's reporting and workflow needs.

Q: What are the typical first steps? We begin by gathering your needs and presenting sample pre- and post-inspection setups and solutions to your team. Based on your team's needs, we develop an implementation plan that includes the scope, tasks, and schedule for your pre- and post-inspection application, as well as testing, training, and Go-Live support.

Q: What is unique about PreCise's Pre- and Post-Inspection application? PreCise offers configurable forms that your staff can add and manage, with no limits on the number of forms or users. These forms are accessible on any connected device, and workflows between the drivers and the fleet services team are automated.

Q: What is the purpose of a pre-trip inspection? Pre-trip inspections identify potential mechanical issues that could pose safety hazards on the road. Pre-trip inspections minimize risks and offer proactive protection for your drivers and fleet.
