PreCise MRM's Dispatch Notifications Are Here

The new feature empowers fleet managers to communicate with their drivers to organize faster response times and run smoother operations.
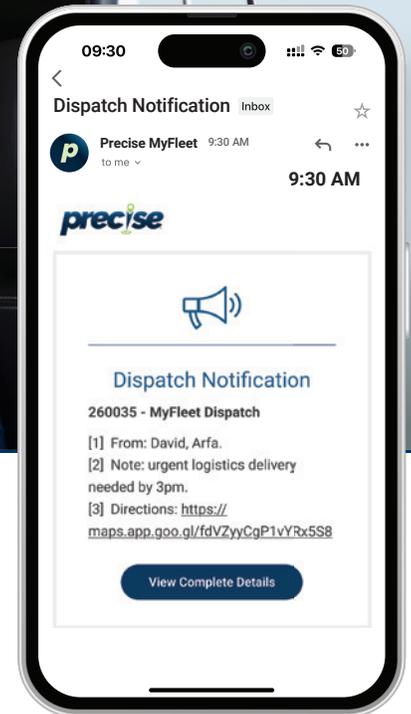

Dispatch Notifications

PreCise MRM, a leader in Automatic Vehicle Location (AVL) telematics solutions, is excited to announce its new dispatch notifications feature. This feature enables fleet managers to quickly dispatch drivers or other fleet assets to specific locations.

How Does It Work?

The dispatch notification is built into the PreCise MRM MyFleet website and is available to all users. There are two main parts of using the dispatch notification feature: enabling dispatch notifications for users and sending a dispatch notification. PreCise subscribers can choose to send alerts via email or SMS. This feature allows fleet managers to send their assets to another asset that needs backup, or to a specific location. Google driving directions to the exact location are always linked in the notifications.

> *Dispatch Notifications are a natural evolution of our platform— bringing together location intelligence and operational agility.*

General

- **Faster Response Times:** Quickly alert nearby drivers to respond to incidents, service calls, or weather events.

- **Improved Operational Efficiency:** Automatically identifies the 10 closest assets to a location, reducing manual coordination.

- **Reduced Downtime:** Mobilize backup vehicles or reroute drivers instantly to maintain service continuity.

- **User-Friendly Interface:** Map-based selection makes dispatching intuitive for users.

- **Scalable Design:** Works seamlessly whether you manage 5 vehicles or 500.

Communication

- **Multi-Channel Notifications:** Send alerts via SMS or email to ensure drivers receive messages in real time.

- **Smart Code Compliance:** SMS messages are optimized for carrier delivery, minimizing delays or failed transmissions.

- **Compliance-Ready Dispatch History:** Alerts are logged for up to one year to support audits and internal reviews.

AVL Tracking Intelligence

- **Real-Time Location Reporting:** Make Dispatch decisions based on real-time asset data, improving accuracy and resource allocation.

- **Supports Emergency and Routine Operations:** Whether it's an emergency response to a snowstorm or routine scheduled maintenance, dispatch notifications keep your fleet agile.

About PreCise

PreCise MRM is a leader in AVL telematics solutions with over 25 years of experience providing innovative tracking devices and accessories that report to a centralized web portal for easily accessible data analytics. PreCise solutions facilitate the measuring, tracking, and reporting of their customer's mobile assets, ensuring efficiency, accuracy, and superior customer service.
