

Get Streamlined Integrations with PreCise's Professional Services

PreCise integrates with enterprise systems such as Esri, asset and work management, and fleet enterprise systems to deliver reliable, real-time insight across your organization.

What is Integration Planning?

APIs have become an industry standard for connecting systems, unlocking data, and scaling operations—but while APIs are everywhere, API experts are scarce. PreCise's Integration Services team has experts that bridge the gap between powerful enterprise applications and fleet management solutions. Let PreCise take the complexity out of integrations by handling all your API needs. We do the heavy lifting, so you don't have to: planning, building, testing, deploying, and supporting your system integrations.

Planning

PreCise identifies your needs and builds an integration plan roadmap for your organization. PreCise integration plans include:

- Meeting with your organization's key stakeholders
- Facilitating workshops to provide integration education
- Gathering detailed requirements and current system environment details to build out this plan
- Delivering an integration roadmap, ensuring stakeholders understand the implementation process and the implementation costs

Integration Capabilities

Esri Integration

PreCise provides a variety of Esri integrations that enhance the efficiency of day-to-day operations. As a long-time partner of Esri, our Professional Service engineers are experts in Esri technology solutions.

PreCise is available to assist organizations with all aspects of Esri technology integration, including:

- **ArcGIS Velocity**
- **GeoEvent Server**
- **Esri's ArcGIS Solutions:** Winter Weather, Street Sweeping, and Mowing Operations
- **Bidirectional Integrations:** Esri maps to PreCise AVL and PreCise AVL to Esri Maps
- **Integration configuration and programming:** Data Pipelines, Python, Arcade and other solutions such as mobile apps or Experience Builder development

PreCise has an Esri ArcGIS System and Esri State & Local Government Specialty designation, making us uniquely qualified experts for all your Esri API integration needs.

Asset and Work Order Management System Integration

PreCise Professional Services Engineers have a comprehensive background in asset and work management system integration. We are a Technology and Development Partner with Trimble Unity Suite, and have worked with Infor, CentralSquare, IBM Maximo, and OpenGov. PreCise can help with:

- Planning, designing and configuring these systems
- Integrating with their APIs
- Building products that interface with these systems

Fleet and Fuel Management System Integration

PreCise integrations improve preventative vehicle maintenance and monitoring of overall fleet health in real-time.

By connecting directly to a vehicle's ECU, PreCise integrates with fleet management systems like Faster and Fleetio to power preventative maintenance and real-time fleet health monitoring—delivering essential data such as:

- Fuel usage
- Mileage (odometer)
- Engine hours
- Location
- VIN
- Engine and DTC Codes

Advanced Two-Way Integration and Add-on Services

PreCise also intakes data and services from 3rd party solutions and sources. We can integrate maps and data into our system, enabling:

- Route visibility
- Open work order transfers for on-the-job reports
- Response to real-time events, such as weather or traffic services

API Training for Developers or Contractors

Want your developers to take their integration skills to the next level? PreCise Professional Services trains your engineers in how to use our API. The process is simple:

- Developers or contractors must sign an API agreement if they are going to be utilizing the API
- Spend a minimum of one day training

FAQs

What systems can the AVL platform integrate with?

Any system that has an open API. We also have several pre-built connectors with partners such as Esri, Trimble, Fleetio and more to make the integration seamless and easy to set up.

Do you offer custom integrations?

Yes! If you need specific integrations, we are available to assist you at various levels (e.g., full integration support, facilitate training for your staff, or a hybrid approach where we implement parts of the integration and your staff implements others).

What is included in Integrations Consulting services?

Integrations Consulting typically includes:

- Discovery & requirements gathering
- Technical architecture design
- Data mapping & transformation
- Development
- Testing & validation
- Deployment & monitoring support
- Documentation & knowledge transfer
- Go-live support

How long does an integration project typically take?

The length of an integration project varies depending on two factors: type of integration and amount of required support. For example, PreCise MRM has a Velocity feed (Esri Integration) that can be set up in 10 minutes. More complex projects require a longer implementation duration. We identify the time, resources, and cost for a project during the first phase of our Integrations Consulting.
