

Redefine Public Engagement and Cultivate Community Trust with the Real-Time Map.

Residents can now track and view assets and completed routes with our customizable public map solution.

Designed to keep your residents informed about their communities and public assets, the Public Map feature demonstrates that services are being delivered to the public as promised, fostering trust. Making information accessible significantly reduces support requests—freeing your staff to focus on more complex tasks. It also enhances business-to-business coordination by sharing live fleet locations with partners, improving planning and overall efficiency.

PreCise's Public Map Feature—Transparent, Accessible, and Efficient

Benefits

- **Transparency:** promote workforce accountability and provide residents and clientele with incident response information.
- **Accountability and Trust:** share information publicly to display that services are being delivered as promised and to foster trust.
- **Reduced Support Requests:** cut down your number of inbound inquiries when you make information accessible. Your support staff will have more time to deal with more complex concerns.
- **Business-to-business Coordination:** work in coordination with your partners by sharing live fleet locations to improve planning and overall efficiency.
- **Marketing:** showcase your operation's efficiency to potential customers. For municipalities, boost civic engagement.

Capabilities

- **Customizable Configurations:** Asset Selection, Enable Route Popups (for Route Completion Public Maps only), Map Delay, Refresh Interval, and Measurement Preference.
- **Asset Tracking:** displays assets in near real-time.
- **Route Completion:** displays selected route completion levels.
- **Gradient:** displays the number of passes on a route segment based on its color.

Integrations

Your Public Map* can be integrated into your platform in two ways:

- **Using an inline frame (iframe)** that embeds the Public Map directly into a webpage.
- **Using a direct link provided by PreCise** that is copied and pasted to your website.

*The Public Map uses Esri for viewers.

FAQ's

Q: Why would I use PreCise Public Facing Map?

Customers deploy the Public Map feature to share the details of their operations with the public. In doing so, they reduce service calls and gain public trust by displaying current operations.

Q: What is the process of setting up the feature?

After the project has been initiated, you simply fill out your Public Map customizations on the MyFleet website. Once saved, the PreCise solution generates your Public Map as specified. Within a few minutes, your link will be generated, and you can use it as desired.

Q: Is the map in real-time for the public or is there a delay?

The map is presented in near real-time, but the delay can be configured to best suit you and your community's needs. The most common delay configuration is about 30 minutes.

Q: How is the map available to public?

PreCise hosts the service, making it as simple as embedding it into your website or posting the link where your visitors can navigate to your public map site.
